Getting Started Guide

R3 Treatment Plan Audit Application | Your first visit on this laptop

☐ 1. Turn on the laptop and connect to Wi-Fi

Plug in the charger and turn on the laptop. On the Windows sign-in screen, select **Marleigh Johnson** and use the Windows PIN or password provided separately. Use the network icon near the clock to connect to your approved Wi-Fi.

☐ 2. Open the application

On the desktop, double-click **(1) Start IZ Clinical Notes Analyzer**. Wait for the browser to open; avoid clicking repeatedly. The shortcut uses the older IZ name. If the app is already running, open **http://localhost:8000** in the browser on this laptop.

☐ 3. Sign in to the clinical app

Use the **app username and password provided separately**; these may differ from your Windows sign-in. Follow any password-change prompts. If shown a recovery code, save it privately and confirm that you saved it.

☐ 4. Check that you can see saved data

Open **Status Dashboard**, then **Patient Roster**. Clear any search, choose **All sources** if available, and refresh the list. Open a record by its medical record number (MRN). Confirm the correct person and source, then open a saved plan and check that its dates and **Checklist Evidence** are visible. Ask R3 support which record to use for this first check.

☐ 5. Check the connection with R3 support

For your first connection check, have R3 support confirm that Alleva is configured and approved for this laptop. Follow their instructions for any connection test or record refresh. A successful test does not mean records were imported. If a pull is approved and available, let it finish, read any warnings, and verify the resulting records. If blocked, contact support.

☐ 6. Finish safely

Click **Sign out** in the app. Press **Windows key + L** to lock the laptop when stepping away. To stop the app, use **(2) Stop IZ Clinical Notes Analyzer**.

If something does not work

If the app is stuck, finish active work, use shortcut **(2) Stop**, then **(1) Start**. If records are still missing or sign-in fails, contact your R3 support person. Use **(4) Quick Assist - R3 Support** only with a trusted support person. For more help, open **(6) IZ Clinical Notes Analyzer User Guide**.

Keep passwords, recovery codes, and patient information private.
